Debrissoft® Duo NEW

Discover the new side of Debrissoft.

Original soft, white side
Removes debris,
exudate and biofilm
from the wound.

NEW

Textured beige side
Makes it easy to
loosen firmly adherent,
fibrinous slough.¹

Debrissoft® Duo

Trust in the fibers you know and love.

- Millions of beveled monofilament polyester fibers
- Designed to lift, bind, and remove biofilm, bioburden, exudate, debris, skin keratoses, and skin flakes
- Removes 99% of biofilm^{1,2}

Debrissoft® is a safe, innovative, and highly effective product designed to improve wound bed preparation for acute and chronic wounds.^{1,2}

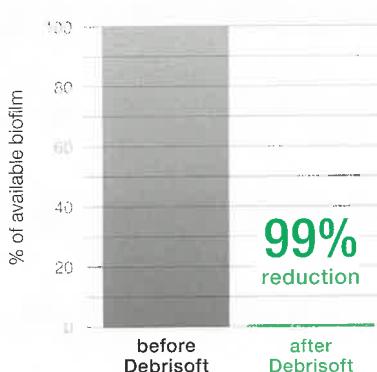

Debrissoft® Duo brings the power of Debrissoft technology to even more barriers to wound healing with an all-new 2-in-1 design.

Indications

Debrissoft is recommended for cleansing of both acute and chronic wounds and also for the skin surrounding the wound:

- Diabetic ulcers
- Arterial and venous ulcers
- Pressure ulcers
- Postoperative wounds healing by secondary intention
- Traumatic and surgical wounds (abrasions, incisions, lacerations)
- Burns and scalds (grade III: after surgical debridement)
- Bullous epidermolysis

Biofilm reduction after mechanical debridement with Debrissoft³

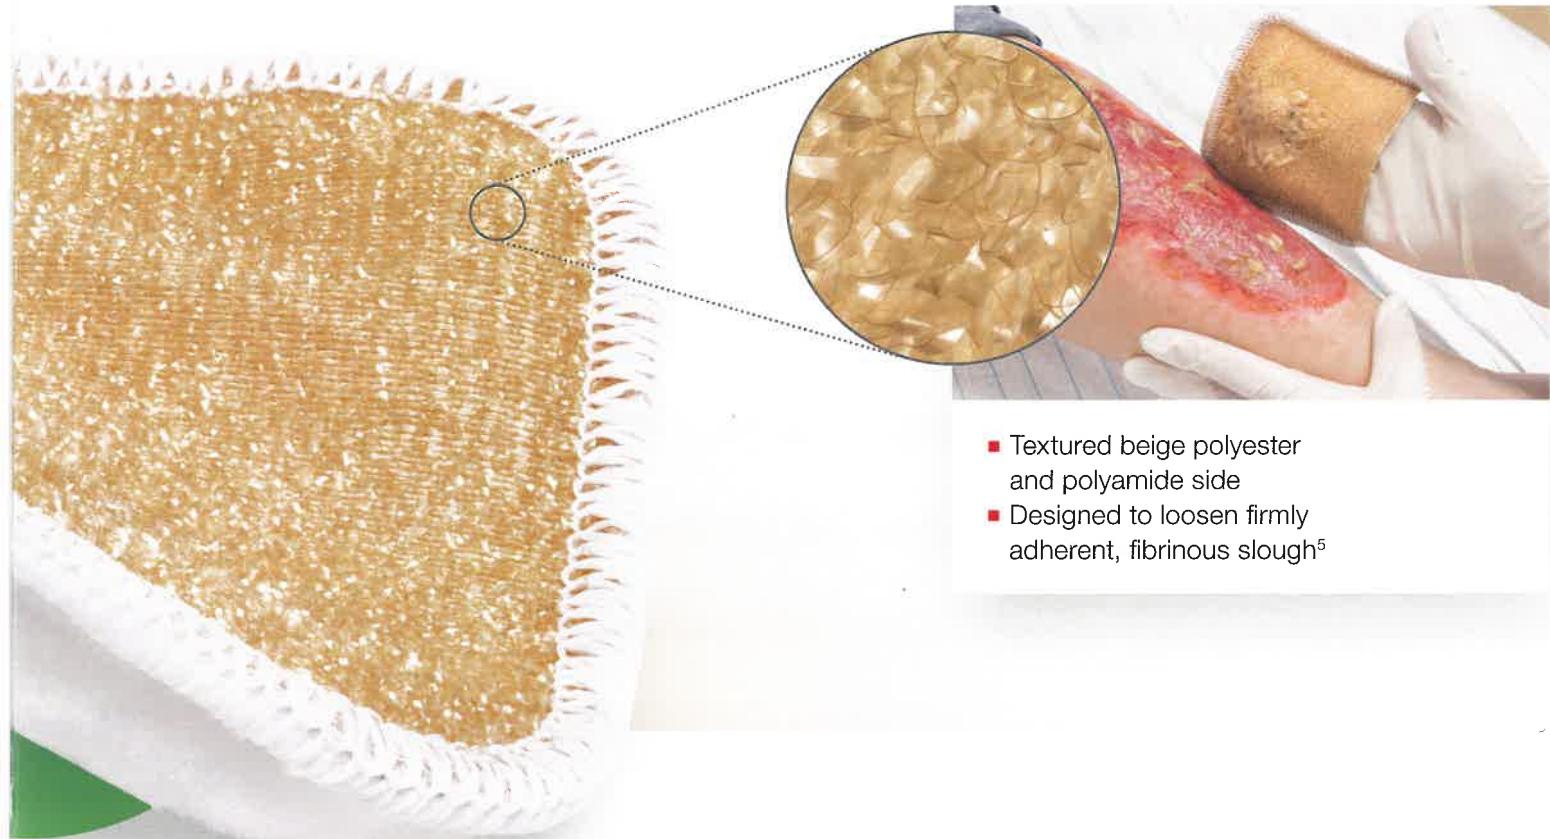

Ergonomic and Economic Value

Save time and costs with Debrissoft technology.⁴ Now with a textured backside pocket, this provides autonomy and ease of application while cleansing the wound.

Debrissoft is more effective at removing moist necrotic tissue than gauze, which may positively impact the trajectory of wound healing and associated costs.⁴

Debrissoft® Duo

A fresh take on superficial wound bed prep.

- Textured beige polyester and polyamide side
- Designed to loosen firmly adherent, fibrinous slough⁵

You have the flexibility to use either side of the pad, or both.

Whichever side you choose, debridement with Debrissoft Duo may positively impact wound healing and outcomes for your patient.

Duration of treatment before results are visible¹

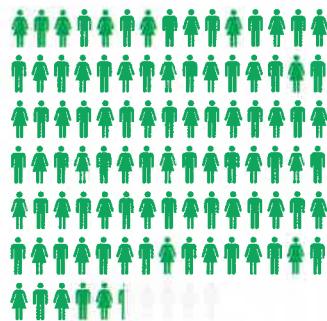

Renowned by Clinicians and Patients

The soft, white side of Debrissoft is renowned by clinicians and patients alike for its rapidly visible results (2–4 minutes dependent on wound size and barriers to healing) and virtually painless cleansing.^{1,2}

In a study, 95.4% of patients reported no pain or almost no pain during a short duration of wound cleansing using the white, soft side of Debrissoft.² Debrissoft may cause less pain than debridement with gauze.⁴

Patients reporting no or almost no pain during wound cleansing²
